FRABA WORLDWIDE

POSITAL Service

36 Month Warranty

All products sold under the POSITAL brand name will include a warranty extending 36 months (3 years) from the date of shipping. This is an industry leading timeframe, supported by decades of experience with rotary encoders.

Partner Network

POSITAL is evolving and growing, entering new markets and increasing distribution. Our global distribution network includes sales partners and system integrators who can provide expert guidance and technical support.

24 Hours Delivery

POSITAL's standard production is typically 72 hours. Thanks to the mass customization approach and state-of-the-art production facility, POSITAL can easily offer a 24h expedited production for a wide range of products (which comes with a modest surcharge).

Contact us!

Feel free to contact us for any questions or requests regarding POSITAL sensors.

COMPANY

Over 50 Years Experience with Position Sensors

POSITAL

POSITAL is a manufacturer of sensors for motion control and safety assurance systems. The company's products, which include rotary encoders, inclinometers, linear position sensors and a large variety of accessories, are used in a wide range of settings, from manufacturing to mining, agriculture to energy.

FRABA Group

POSITAL is a member of the international FRABA Group, with a history that dates from 1918, when Franz Baumgartner established a workshop to build electromagnetic relays in Cologne, Germany. In its current form, the FRABA Group is a market-leading enterprise that makes use of advanced product design and manufacturing process to ensure that its customers enjoy the benefits of technology leadership, choice, product quality and competitive prices. Other FRABA Group subsidiaries include VITECTOR which focuses on protection sensors to guard doors and production machine covers.

Service

POSITAL's unique online product finder is providing access to a huge variety of solutions without requiring specialized knowledge. Many hundred thousand specific datasheets are available in 11 languages and easy to browse. The traditional practice of customization has been replaced by this new approach to a large extent. Furthermore experienced engineers are available in Europe, North America and Asia at different locations to support the large global network of distributors and customers within their time zone and in many languages.

Production

POSITAL's sensors are produced through a highly innovative, data-centered manufacturing system that enables us to build a wide variety of product configurations on a made-to-order basis, while maintaining the cost efficiencies of large-scale mass production. Even with hundred thousands of unique configurations available, standard products are ready to ship within 3 working days of receiving an order.

COMPANY

FRABA Revolutions

Mass Customization

POSITAL encoders are based on a modular architecture that makes it possible for the company to offer an extremely wide range of configuration options. Using POSITAL's online product finder tool, customers can "build" the devices that they need, specifying the performance characteristics, mechanical features, communications interfaces and so on.

Once customers have identified exactly what they require, devices are custom-assembled through a computer-controlled manufacturing system that ensures quality, traceability and rapid delivery of the final product at prices comparable to standardized mass-produced items. This approach makes the vision of "MOQ-1" (minimum order quantity – one) a practical reality!

Magnetic Technology to a New Level

Magnetic encoders are typically more compact and rugged, but until now, have offered lower levels of precision and dynamic response. POSITAL has eliminated the need for compromise by developing a new generation of magnetic absolute and incremental encoders that match the performance of optical shaft-mounted encoders in all but the most demanding applications.

The core element of POSITAL's series of magnetic encoders is an advanced Hall-effect sensor system, combined with a powerful 32-bit microprocessor and carefully optimized signal processing software. This combination results in levels of resolution, accuracy and dynamic response that rival the performance level of optical encoders.

POSITAL STORY

1918

Founded by Franz Baumgartner in Cologne, Germany and originally specialized in mechanical relays.

2000

The first foreign subsidiary opens up in Princeton, New Jersey, USA.

1973

FRABA manufactures one of the first encoders based on optical measurement technology.

2002

POSITAL product portfolio expands to include industrial inclinometers.

1963

FRABA starts selling "brush" absolute rotary encoders.

1993

Dr. Achim Leeser, Christian Leeser and Axel Wiemann take over the company. They restructure the company into a group of independent companies combined by a common Mission and Guiding Principles.

2001

FRABA introduces 2 new business units, **POSITAL** which continues the encoder and position sensor business and **VITECTOR** which focuses on safety systems for the door and gate market.

POSITAL
FRABA

VITECTOR
FRABA

POSITAL STORY

2005

POSITAL launches a new line of magnetic multiturn encoders based on a Wiegand Wire Energy Harvesting Technology.

2009

The first Asian subsidiary opens in Singapore.

2013

High precision magnetic absolute and incremental encoders offered by POSITAL. POSITAL introduces a unique online product finder where users can select from more than 1 million sensors.

2015

The first Chinese subsidiary opens in Shanghai. Planning for production in Asia and North America.

2006

CONISTICS, FRABA's advanced manufacturing plant opens in Slubice, Poland. CONISTICS is tailored to produce small lot sizes in a wide range of configurations.

2011

FRABA's holding office opens in Heerlen, NL and product development cell, CENTITECH, moves to Aachen.

2016

POSITAL continues the "mass customization" business system by offering more mechanical and electric options for the existing product lines as well as adding a large variety of product accessories.

2014

POSITAL launches a new generation of programmable absolute and incremental encoders. With the new configuration tool customers have access to more than 1 million sensors.

Position and Motion Sensors

High Precision IXARC Rotary Encoders

Motion control applications – ranging from factory automation to mobile machinery – require accurate, realtime information about the location of mechanical components. The IXARC line of rotary encoders provide precise and reliable measurement of the angular positions of joints, drive shafts, pulleys, etc... Available electronic connections range from simple analog outputs to sophisticated Fieldbus and Industrial Ethernet interfaces.

- **Absolute and Incremental Technology**
- **Optical and Magnetic Encoders up to 16 bit Resolution**

Compact Industrial TILTIX Inclinometers

Accurate measurement of tilt or inclination is very important for motion control and safety systems. Inclinometers provide single or dual-axis angle measurement in an economical package. Relying on gravity for their measurement, these sensors have no exposed moving parts, resulting in easy installation and high environmental protection.

- **High Accuracy of 0.1° and Resolution of 0.01°**
- **Measurement Range ±90° (Dual Axis) or 360° (Single Axis)**

Versatile LINARIX Linear Sensors

Many applications require linear motion to be monitored for system control or to ensure safety. With lengths ranging from 1 m to 30 m [3 to 98 ft], LINARIX draw wire sensors are available in many configurations to meet an application's requirements. Options include a wide variety of outputs (including analog, incremental, Fieldbus and Ethernet variants), heavy duty housings and compact designs.

- **Position Measurement with Resolutions up to 2 μm**
- **Variety of Materials**

Wide Selection of Accessories

POSITAL offers a wide variety of accessories that simplify sensor installation. Mating connectors of different styles and lengths ensure proper electrical connections. Using appropriate mounting accessories minimize wear and tear on encoders and help to ensure a long and reliable life cycle. Interface modules and displays are also available to provide users with immediate access to measurements.

- **Different Cable Designs and Lengths**
- **Adapter Flanges for Precise Installation**

INDUSTRIES

Power Generation and Water

Wind Energy

IXARC heavy duty absolute and incremental encoders provide precise angle measurement for pitch control systems that dynamically adjust the angle of wind turbine rotor blades. High resolution encoders are also ideal for yaw control ensuring optimal positioning of the nacelle with respect to wind direction.

- Salt Resistant Sensors
- Increased Efficiency in Extreme Environments

Solar Energy

For both photovoltaic systems and concentrated power plants (CSP, CPV), solar tracking systems increase energy efficiency. The compact and accurate IXARC encoders and TILTIX inclinometers are ideal for both single and two axis tracking systems which not only follow the sun from east to west but also have an adjusting elevation system.

- Optimized Solar Panel Orientation
- Position Maintained even after Power Loss

Water / Wastewater

Accurate monitoring of sluice gates for flood control, sewage and power plants, dams or irrigation facilities can be monitored remotely with IXARC rotary encoders and LINARIX linear sensors. The IXARC magnetic rotary encoders are also ideal for precise valve positioning.

- Minimum Maintenance, Increased Reliability
- Easy Remote Control, Variety of Interfaces

Oil and Gas

Whether it's offshore or onshore, an exploration platform or a refinery POSITAL explosion proof IECEx and ATEX certified products can provide accurate positioning and speed monitoring in pipe handling equipment or in blow out preventer (BOP) systems.

- Certified Sensors for Explosive Environments
- Accurate Leveling for Subsea Systems

INDUSTRIES

Material Handling

Automated Storage Retrieval Systems

Increasing warehouse and labor costs make the use of automatic storage and retrieval systems economically attractive. IXARC rotary encoders and LINARIX linear sensors are used in these systems to give the position of the loading equipment with respect to the vertical racks where goods are stored.

- Vertical and Horizontal Positioning of the Units
- Accurate Monitoring of the Arms

Overhead Conveyors

Assembly lines for automotive production have dedicated work stations for different processes. Typically the vehicle chassis is moved through a series of such work stations using overhead conveyors. IXARC absolute encoders help achieve this movement in a safe and controlled manner.

- Fieldbus & Ethernet for Fast Communication
- For SIL2, SIL3 Certified for Safe Operation

Baggage Handling

Due to stringent security requirements, all airline baggage needs to be screened and distributed in a secure manner. A labyrinth of conveyors helps sort these in a correct fashion. Programmable Fieldbus IXARC rotary encoders help track the position of multiple baggage conveyors.

- Diagnostics LED, Reduced System Installation
- Simplified Wiring, Decreased Time & Costs

Forklifts and Automated Guided Vehicles

For forklifts and AGVs that carry loads from one point to another, safety is of utmost importance. TILTIX inclinometers and LINARIX linear sensors help to avoid accidental contact and insure precise positioning of loads.

- Simple Communication with Analog Interfaces
- Programmable Measurement by the User

INDUSTRIES

Mobile Machinery

Mining

Drill rigs, excavators and mobile hammering systems are complicated machines which must perform flawlessly under the harshest conditions. For these applications the ATEX certified IXARC rotary encoders can be used to provide precise positioning of drill heads and masts. Single and dual axis POSITAL TILTIX inclinometers further equip operators with essential information for platform leveling and arm positioning.

- **Certified Sensors for Explosive Environments**
- **Precise Positioning & Leveling**

Cranes

Cranes and other construction machinery are required to be safe, efficient and reliable. Positioning is of prime importance, and redundant systems are often used to eliminate errors. To address this requirement the IXARC SIL-2 encoders are an excellent fit, combining redundant measurement with an easy-to-integrate interface.

- **Sensors for High Levels of Shock & Vibration**
- **Increased Accuracy & Safety**

Arm / Boom Extension

Trucks with long boom extensions such as fire trucks or concrete pumps have to reach to high-rise buildings, often over large obstacles. IXARC rotary encoders can be mounted directly on the rotational joints to provide data for active damping systems. TILTIX single or dual axis inclinometers can be used to monitor the position of the boom arm or for base leveling.

- **IP69K Sensors, Pressure & Temperature Resistant**
- **Easy Communication, CAN, Incremental & Analog Interfaces**

Scissor Lifts and Aerial Work Platforms

Scissor lifts need constant tilt monitoring to prevent tip-overs, an easy job for the dual axis TILTIX inclinometers. IXARC rotary encoders and LINARIX linear sensors are ideal for situations where the height of the lift needs to be known.

- **Compact & Economical Sensors**
- **For SIL2, SIL3 Certified for Safe Operation**

INDUSTRIES

Factory Automation

Packaging

High precision is needed in processes like form filling, sealing, palletizing, pick and place, cartoning and cardboard folding. The IXARC rotary encoders with Fieldbus, Ethernet or incremental interfaces can simplify wiring and keep costs down while their stainless steel housing can withstand high temperatures and pressure wash downs.

- **Precise and Fast Position Feedback**
- **Reliability at Maximum Work Speed**

Textile and Plastic

In both textile and plastic manufacturing the material used are changed periodically and constant adjustments need to be made in roll and nozzle positioning. IXARC rotary encoders and LINARIX linear sensors can help speed up these changes.

- **Reduced Downtime and Increased Efficiency**
- **Reliable Positioning in Hot & Humid Areas**

Food and Beverage

Filling bottles to the right level, accurate labeling and strict regulatory requirements are a few issues that manufactures have to deal with. IXARC rotary encoders and LINARIX linear sensors are used in the food and beverage industry to support efficient and hygienic food packaging.

- **Stainless Steel Version, Chemical Resistance**
- **Accurate Process Monitoring**

Industrial Robots

Industrial robots are used widely in manufacturing processes around the world. They carry out activities like welding, painting, assembling which all demand high accuracy. IXARC rotary encoders and kit encoders mounted on the joints of robots can measure and control their movements.

- **Compact Size, Ideal for Retrofitting**
- **Absolute & Incremental Measurement**

INDUSTRIES

Healthcare and Elevators

Healthcare

Modern devices used in the healthcare industry demand advanced technology for precise positioning. TILTIX compact inclinometers provide accurate measurements and are built to last the life of the equipment. LINARIX linear sensors offer a solution for tracking the position of patient tables. For more complex applications, such as fluoroscopy or radiography tables or surgical C-arms, that require coordinated positioning of several components, IXARC rotary encoders are an excellent option.

- Precise Positioning of Patient & Scanner
- Simple Installation, Easier Calibration

Elevators

Elevator cars need to be accurately positioned with respect to each floor they visit. IXARC absolute encoders help provide this information without the need of a ground reference. With IXARC absolute encoders, knowledge of the position of the elevator car is always retained, even during power failures. IXARC encoders supporting the CANopen Lift protocol help meet the high safety standards of this industry. Cost efficient LINARIX linear sensors are an excellent solution for door positioning.

- Absolute & Incremental Positioning
- High Shaft Load, Increased Safety

IXARC ROTARY ENCODERS

Magnetic Measurement Principles

Magnetic rotary encoders determine angular position using magnetic field sensor technology. A permanent magnet **A** fixed to the encoder's shaft creates a magnetic field which is sampled by a sensor **B** that generates an accurate absolute position reading.

Signal Processing is the Key to High Performance

The technological leap that pushes POSITAL's IXARC magnetic encoders to the performance level of optical systems is based on a new generation of sensor systems. The combination of a custom Hall-effect sensor and complex signal processing algorithms running on a powerful 32 bit microprocessor results in a considerably improved resolution and accuracy, along with latency times of only a few microseconds. POSITAL has also implemented an incremental interface and can now offer a complete range of encoder solutions.

Multiturn Innovation

POSITAL can also provide absolute multiturn measurements by means of a revolution counter system

that uses an energy harvesting system based on the Wiegand effect. This system requires no gears or batteries. Eliminating batteries brings about many advantages. Batteries have a limited lifespan, weigh a lot, and often contain harmful substances. Gear units have disadvantages of their own being large, complex, costly and vulnerable to shock and vibration. Regardless of the rotational speed, even at near-zero, the energy harvesting system generates short, powerful voltage pulses, sufficient to power the counting electronics. The result is a revolution counter that is independent of any external power supply. This technology, which has proven itself since 2005, enables maintenance-free reliable measurement of absolute positions, even in demanding environments, for years to come.

Advantages of Magnetic Encoders

- > Robust and Durable
- > Mechanically Simple and Economical – No Battery, No Gear
- > Compact Design for Installation in Small Spaces

IXARC ROTARY ENCODERS

Optical Measurement Principles

A key component of optical rotary encoders is a code disk **A** mounted on the encoder shaft **B**. This disk is made of unbreakable plastic that has a concentric pattern of transparent and opaque areas. Infrared light from an LED **C** shines through the code disk, onto an array of photoreceptors. As the shaft turns, a unique combination of photoreceptors are illuminated or blocked from light by the pattern on the disk. For multiturn models, there is an additional set of code discs arranged in a gear train **D**. As the main encoder shaft rotates, these discs are geared together to turn like the wheels of an odometer. The rotational position of each disc is monitored optically and the output is a count of the net number of rotations of the encoder shaft.

Functionality

POSITAL's IXARC optical absolute rotary encoders use highly integrated Opto-ASICs, providing a resolution up to 16 bits (65,536 steps) per turn. For multiturn models, the measuring range is extended by the mechanically geared code disks to as many as 16,384 (2^{14}) revolutions.

Advantages of Optical Encoders

- > High Resolution and Accuracy along with Excellent Dynamic Response
- > For Use in Areas with High Magnetic Fields
- > No Risk of These Devices Losing Track of Their Absolute Position
- > No Backup Batteries Required

IXARC ROTARY ENCODERS

Absolute vs Incremental Rotary Encoders

Absolute Rotary Encoders

Absolute rotary encoders are capable of providing unique position values from the moment they are switched on. This is accomplished by detecting the position of a coded element. All positions in these systems correspond to a unique code. Even movements that occur while the system is without power are translated into accurate position values once the encoder is powered up again.

Advantages

- Multiple Interface Options: Analog, Ethernet, Fieldbus, Parallel, Serial
- Singleturn and Multiturn Revolution
- Resolution up to 16 bit
- Optical and Magnetic Measuring Principle

Incremental Rotary Encoders

Incremental encoders generate an output signal each time the shaft rotates a certain angle. The number of signals (pulses) per turn (PPR defines the resolution of the device. Each time the encoder is powered on it begins counting from zero, regardless of where the shaft is. Initial homing to a reference point is therefore inevitable in all positioning tasks, both upon start up of the control system and whenever power to the encoder has been interrupted.

Advantages

- A, B, Z, and Inverted Signals as HTL (Push-Pull) or TTL (RS422)
- Any Pulse Count up to 16384 Pulses per Revolution Available
- 65384 Edges Quadrature
- Programmable for Flexibility
- Magnetic Measuring Principle

IXARC ROTARY ENCODERS

Programmable Encoders

Programmable Features – Save Time and Money

POSITAL has replaced hardware by software and has taken versatility to a new level. Resolution (PPR) can be set anywhere from one to 16,384 pulses per turn. Similarly, pulse direction and the output driver – either Push-Pull (HTL) or RS422 (TTL) – can be defined through software parameters. All of these parameters can be configured very easily using the UBIFAST tool and any WiFi-enabled smartphone, tablet or laptop computer. It is not necessary to install any software or app. Additionally all the configuration data for each encoder is sent to POSITAL's ERP system and can be retrieved in the future for replacement. since a small number of devices can be programmed to take on a wide range of measurement tasks. Distributors and OEM customers can reduce their inventory levels and simplify the supply chain. System integrators can decide at the last minute how to tailor the encoder to specific requirements on site and initiate the purchase of the encoders while final design requirements are still under discussion. End users can receive spare parts from a distributor or system integrator quickly.

Simple Programming

With the new capabilities, the encoders' performance characteristics can be extensively modified through software changes, without requiring any changes to physical components. In a related development, POSITAL is introducing the UBIFAST configuration tool, a hardware module that can be easily connected to programmable encoders through accessory cables. The UBIFAST tool features a built-in WiFi hotspot and webserver. Once the tool has been powered up, any WiFi-enabled smartphone, tablet, or laptop computer can connect to the WiFi hotspot and the configuration interface will automatically open up in a standard web browser window – no app, no software installation, and no internet connection are required. POSITAL also presents an internet-enabled configuration management system for IXARC programmable encoders. Whenever a device is reconfigured, the operator has the option of registering the changes with POSITAL through an automatic e-mail interface.

14 Multiturn: 14 bit (16384 rev)

5 Resolution

12 12 bit (4096 Steps / 0.088°)

13 13 bit (8192 Steps / 0.044°)

16 16 bit (65536 Steps / 0.005°)

6 Mechanical Design and Protection Class

Blind Hollow Shaft (Page 36)

Synchro (Page 43)

Clamp (Page 50)

Through Hollow (Page 58)

Square (Page 59)

7 Connection Type

CAW Cable: Axial 1 m

2AW Cable: Axial 2 m

5AW Cable: Axial 5 m

AAW Cable: Axial 10 m

PAM Connector: Axial M12, 5 pin

PRM Connector: Radial M12, 5 pin

PRN Connector: Radial 2 x M12, 5 pin

> Rugged Connectors and Cables

- Reliable Electrical Connections
- M12 & M23 Data, Bus and Signal Connectors
- Straight and Angled Versions
- Variety of Cable Material and Lengths
- Shielded for Protection Against Noise and Interference

KIT ENCODERS

Fast.
Smart.
Efficient.

No Battery – Robust – Easy to Install

KIT ENCODERS

Easy Installation – No Maintenance

Innovative Technology

POSITAL's kit encoders offer a unique combination of accuracy, reliability and cost efficiency. Absolute measurement versions provide 17 bit electrical resolution and multiturn position measurements with a range of more than one million revolutions. A second version provides a combined incremental+UVW output with a resolution of up to 16384 PPR. Kit encoder components include an electronics package mounted on a compact 35 mm diameter PCB and a small permanent magnet, designed to be mounted on the end of the motor's shaft. The electronics package includes four Hall-effect sensors, a powerful 32-bit microprocessor and a rotation counter powered by POSITAL's Wiegand energy harvesting system.

Energy Harvesting – No Battery

The energy harvesting system is based on the Wiegand effect and eliminates the need for backup batteries or complex gear systems. At any rotational speed, even the slowest, the Wiegand system

generates short, powerful voltage pulses with each complete revolution. These pulses supply enough power to activate the rotation counter and related electronics so that the encoder will keep count of complete rotations at all times, even if these occur when the external power supply is unavailable. This principle, which has proven itself since 2005, ensures reliable, maintenance-free multiturn absolute position measurements.

Advantages

POSITAL's contact free measurement technology has no moving parts and is highly resistant to shock and vibration. POSITAL's kit encoders are available with several non-proprietary electrical interfaces including BISS and SSI for absolute measurements, UVW and ABZ for incremental signals. Additional protocols based on the RS485 interface can be implemented.

- **Absolute Multiturn & Incremental Interface**
- **No Battery – No Maintenance**
- **No Ball Bearings & Compact Design**
- **Insensitive to Dust and Moisture**
- **High Shock and Vibration Resistance**

KIT ENCODERS

Absolute and Incremental – Robust and Programmable

Plug and Play

While optical kit encoders typically require near clean-room assembly conditions, POSITAL's magnetic encoders are significantly less sensitive to dust and moisture and can be installed in normal factory settings. An integrated auto-calibration function eliminates the need for complex production equipment: during normal product testing, the encoder can be connected to a small Kit Control Box. As the shaft rotates, the auto-calibration system corrects for minor misalignment between the shaft and the electronics package. The Kit Control Box can also be used to program the encoder for important performance parameters such as the number of pulses generated per revolution, without requiring any changes to the mechanical or electrical components. This increases the versatility of the kit encoders.

The embedded software on the kit encoder will also monitor the health of the electronics package and provide diagnostic signals over the lifetime of the encoder. Compact and inexpensive shielding accessories are available to protect the electronic com-

ponents and Hall-effect sensors from external magnetic fields such as those generated by magnetic brakes.

Specifications

- > Electrical Resolution: Up to 17 Bit
- > Multiturn Range: Up to 32 Bit
- > Accuracy: 0.1°
- > Electrical Interface: BISS C, SSI, RS485, Incremental TTL up to 16384 PPR + UVW (2, 4, 6 or 8 poles)
- > Diameter: 36 mm
- > Height: 24.2 mm (Multiturn with Housing)
- > Temperature Range: -40 to +105°C
- > Rotational Speed: Up to 12000 RPM
- > Auto Calibration – No Complex Equipment
- > Cable Clip Ensures Proper Grounding and Easy Installation
- > Extensive Diagnostic Coverage
- > Various Programmable Parameters

KIT ENCODERS

Technical Drawings

LINARIX LINEAR SENSORS

Repeatable Length Measurement

Technology

POSITAL's LINARIX draw wire sensors measure linear motion by displacing a stainless steel wire **A** wound around a wire drum **B** that actuates the rotary encoder **C** coupled to it via coupling **D**. A spring **E** is used to retract the wire in the housing. The encoder provides a proportional output. Measurements are highly accurate, reliable and the systems have very long lifetime.

The LINARIX line offers a wide range of measurement lengths ranging from 1 m to 30 m [3 to 98 ft] and position output in almost every available industrial interface both analog and digital as well as incremental and absolute. The line is featured with different mechanical options, housing materials and springs to enable you to always find the most suitable product for your application.

Compared to conventional linear pots and linear measurement systems using multiple gears and encoders LINARIX line are more durable and can be used to replace them directly avoiding common problems of slippage and wear. Draw wire sensors from POSITAL provide extremely precise measurements because of inherent accuracy of encoders while rugged construction ensures reliable performance even under extreme conditions.

POSITAL products listed below are classified according to interfaces and draw wire mechanics. Please use our online Product Finder to access entire data sheets.

LINARIX LINEAR SENSORS

TILTIX INCLINOMETER

Precise Tilt Measurement

TILTIX INCLINOMETERS

Industrial Inclinerometers

Static Inclinometer

POSITAL's inclinometers are equipped with dynamic MEMS (micro-electro-mechanical system) accelerometers that are used to measure inclination (tilt) by measuring gravitational force.

A 'micro mass' **A** is suspended in a flexible support structure **B**. Any movement will induce a displacement of the mass, resulting in a change of capacitance between the mass and the supporting structure. Changes of inclination are calculated from the changes in measured capacitance.

This proven method reaches accuracies of up to 0.1° over the measurement range of up to 360° . However, the measurement can be disturbed by external accelerations making the inclinometer capable of operating only in static applications.

Dynamic Inclinometer

POSITAL's acceleration compensated inclinometer use MEMS gyroscopes in addition to MEMS accelerometers. In contrast to accelerometers, gyroscopes are used to measure rotation rate. An algorithm combines signals of both sensors to identify external accelerations and ignore them. This feature dramatically reduces the influence of external accelerations, shocks and vibrations on the output signal.

The compensation of external acceleration forces is very critical for mobile machines and other applications that are constantly in dynamic movement.

POSITAL's dynamic inclinometer are featured with 3D sensors resulting in improved measurement range of the complete space (x-axis $\pm 180^\circ$ and y-axis $\pm 90^\circ$).

TILTIX INCLINOMETERS

Explosion Proof Certified Inclinerometers

Rugged and Reliable Certified Inclinometer

POSITAL has extended its TILTIX family of inclinometers (tilt sensors) to include explosion-proof models designed to operate safely in environments that contain potentially dangerous levels of explosive dust or gases. These devices have been certified in compliance with IECEx and ATEX directives and are suitable for use in mines, oil and gas facilities, agricultural applications, chemical plants, woodworking factories and milling operations.

Like other TILTIX inclinometers, the new models are available in single (0-360°) or dual-axis ($\pm 80^\circ$) versions and feature resolution as high as 0.01° and 0.1° accuracy. Available communications interfaces include DeviceNet, CANopen, Modbus RTU, SSI and analog output. Analog models can be programmed so that a predetermined range of mechanical motion is set span the full electrical output range. Rugged aluminum and 316 stainless steel housings are offered, with other materials available by special order.

Certified to the Following Atex Ratings

> Group I (Mining)

Ex I M2 Ex e mb I Mb

> Group II (Above Ground Operations)

EX II 2G Ex e mb IIc TX Gb (explosive gases)

EX II 2D Ex tb IIIB T80°C Db (flammable dust)

Advantages

- > ATEX and IECEx Certified
- > Zone 1/21 Mining or Oil and Gas
- > High Vibration and Shock Resistance
- > $\pm 80^\circ$ (Dual Axis) or 360° (Single Axis)
- > CANopen, DeviceNet, Analog, SSI, SAE J1939 and ModbusRTU
- > Rugged Aluminum and 316 Stainless Steel Housings
- > Usage in Gas (2G) and Dust (2D) Hazardous Locations
- > Accuracy 0.1° and resolution 0.044°

- C901** J1939 (ACS, AKS)
- M100** Modbus RTU (ACS)
- D101** DeviceNet (ACS)

6 Mounting

- H** Horizontal (Dual Axis)
- V** Vertical (Single Axis)

7 Housing Material

- E2** Fibre-Reinforced Plastic
- K2** Aluminum
- W2** Stainless Steel (ATEX)

8 Connection Type

- CW** Cable: 1m
- 2W** Cable: 2 m
- 5W** Cable: 5 m
- AW** Cable: 10 m
- PM** Connector: M12
- PL** Connector: 2 x M12 Male with Status LED
- PN** Connector: 1 x M12 Male & 1 x M12 Female

> Rugged Connectors and Cables

- Reliable Electrical Connections
- M12 & M23 Data, Bus and Signal Connectors
- Straight and Angled Versions
- Variety of Cable Material and Lengths
- Shielded for Protection Against Noise and Interference

TILTIX INCLINOMETERS

Inclinometers with Dynamic Load Compensation

Innovative Algorithm for Innovative Results

POSITAL has introduced new versions of its TILTIX inclinometers that can provide reliable tilt measurement for moving equipment. These new devices use a combination of electro-mechanical accelerometers and gyroscopes to provide accurate measurements, even if the instruments are subject to strong accelerations.

Specifications

- Resolution 0.01°
- Accuracy 0.3°
- Accuracy of 0.5° during Dynamic Movements
- Internal Cycle Time 5 ms
- Measurement Range $\pm 180^\circ$
- 2 Axes or 1 Axis Measurement
- Horizontal or Vertical Mounting

➤ Inclinometers with

Dynamic Load Compensation

- Compensation of External Accelerations
- Clean Measurement During Dynamic Movements
- Well Protected up to IP69K
- Compact and Robust Die-cast Housing with Integrated T-Coupler

ENCODERMATCH

Competitor Cross Reference Finder

ENCODERMATCH

▶ BY POSITAL

After many years of successfully replacing and re-fitting thousands encoders, POSITAL has created an easy-to-use cross reference finder. Encodermatch is based on a detailed database which provides information about the competitor product, the compatible POSITAL product and the degree of compatibility between the products. If products are not a 100% match, Encodermatch denotes which specific feature is responsible for the incompatibility.

Cross referencing a product in Encodermatch requires only a small amount of information from the user: The manufacture and the known product typekey. Encodermatch can replace more than 10 manufacturers and thousands of products.

Why POSITAL?

- Unique combination of high performance and rugged durability encoders
- Excellent dynamic response and compact size
- Powerful programming capabilities (PPR, resolution, number of turns, direction)
- Large variety of mechanical features and compatible accessories
- Fast delivery, standard products ship within 72h, expedited orders manufactured within 24h
- 36 month warranty period, counting from the date of shipping
- More than 50 years experience in rotary encoders
