

SELECTION GUIDE

S200

High Performance Servo Drives

S200 Series Drives

Industry-Leading Performance In A Small Package

Danaher Motion's Kollmorgen S200 brushless servo drives push high performance servo technology into lower power applications than was previously possible without having to compromise on reliability or package size. Couple an S200 drive with a Kollmorgen AKM servo motor for a complete servo control solution designed to excel in applications such as semiconductor fabrication, electronic assembly, packaging, medical, and woodworking equipment.

Kollmorgen S200 servo drives are the first all digital industrial drives with a velocity loop bandwidth up to 800 Hz offering unmatched system throughput and simplified tuning. High resolution (24 bit) feedback and high performance 3-5 kHz current loop bandwidth provide smooth motion and rapid start and stop action to optimize machine performance. Smart feedback and industry leading high bandwidth deliver fast and accurate "plug and play" commissioning by eliminating the need for servo loop tuning in most applications.

Kollmorgen S200 servo drives come standard with torque or velocity control and with add-on options can support Indexing, CANopen or DeviceNet. They are available for AC (120/240 VAC) or DC (20-90V) operation with current ratings from 1 A rms continuous to 18 A rms peak. They have a compact footprint ranging from 1.1" (28.7mm) wide and 6.0" (152.4mm) tall to 2.2" (54.8mm) wide and 6.9" (175mm) tall with depths ranging from 3.9" (100.8mm) to 5.2" (131.6mm) allowing them to fit into tight spaces. They are UL 508C recognized, CE marked, and conform to EN50178 and EN61800-3 standards.

Separate "Keep Alive" power input allows rapid recovery from emergency stop conditions. Optically isolated inputs/outputs, positive locking connectors and full fault protection promise long machine life and immunity to accidental damage. A single motor power/feedback cable simplifies connectivity. All connectors and LED status indicators are easily accessible from the front of the drive.

If you are looking for a high performance servo drive in a small package, Danaher Motion's S200 servo drives extend the benefits of servo motion control technology to new levels of machine design.

Increased Machine Throughput and Longer Life

Servo system performance is synonymous with machine throughput. The S200 family takes servo performance to new heights.

- Industry-leading current loop bandwidth up to 5KHz and velocity loop bandwidth up to 800Hz means machine throughput can be increased by as much as 2 to 3 times.
- Robust design including full fault protection, locking connectors and optical isolation promise greater machine "up-time".
- Smooth motion, a benefit of sinusoidal current control and high resolution (24 bit) feedback minimizes harsh torque disturbances that can cut short the life of mechanical components.
- Both the AC and the DC input drives are equipped with separate control power input to speed recovery from "E-Stop" conditions.

Reduced Engineering and Support Time

Simplified tuning, friendly Graphical User Interface and shared components with Stepper products.

- Working in conjunction with the new Smart Feedback Device the drive automatically sets the current and velocity loop parameters greatly reducing the need for drive tuning – out of the box "Plug & Play"
- Windows-based Graphical User Interface models the tree format found in Explorer so learning is quick and easy.
- Easy to debug with full fault diagnostics reduce engineering support time.
- Shares option cards, electrical I/O, and GUI components with the P7000 stepper drive family reducing the time required to learn new products.

Reduced Overall Cost

The S200 design requires fewer components helping to lower the overall machine cost.

- S200 drive family and the AKM motor family linked with the new "value" line of cables – dependable Kollmorgen quality now at a lower price.
- Available in a "composite" version that combines the power and feedback into one cable to further reduce commissioning time.
- Single supplier of AC or DC input brushless servo drives and motors and stepper drives and motors reduce vendor list management.

The new Graphical User Interface is designed to expedite the set up process. Although most applications will work with the default parameter that are set automatically during power up, it may be necessary to adjust some of the user parameters to fully utilize all of the drive functionality and to optimize servo loop tuning. If you are familiar with Windows Explorer and tree structures this GUI is designed to make your life simple – now that is "Easy to Use".

Ordering Information:

Servo Drive Family

S2 = S200 series brushless

Current Rating

02 = 1.5 A_{rms} continuous, 4.5 A_{rms} peak¹
03 = 3 A_{rms} continuous, 9 A_{rms} peak
06 = 6 A_{rms} continuous, 18 A_{rms} peak²

Voltage Range

3 = 20 - 90 VDC
6 = 120/240 VAC

Electrical Options

0 = None

Notes:

1 N/A with units having DC input voltage.

2 N/A with units having AC input voltage.

3 Consult customer support for availability of CANopen functionality.

S2 03 3 0 - VT S - xxx

Customization

Omit field for standard configurations

Feedback Device Support

For units w/ VT Functionality option

S = Smart Feedback Device / Halls

For units w/ CN Functionality option

S = Smart Feedback Device / Comcoder

Functionality

CN = CANopen with indexing³

VT = Velocity/Torque modes

Specifications

Drive/Amplifier	S20330	S20630	S20260	S20360
Input Voltage				
Control logic	10-90 VDC		85-265 VAC, 47 TO 420 Hz, 1 phase	
Motor Bus voltage	20-90 VDC		0-264 VAC, 47 to 420 Hz, 1 or 3 phase	
Output Current				
Peak (A rms)	9	18	4.5	9
Peak time (Sec)	1	1	3	3
convection, (40 deg C)	3	6	1.5	3
Performance

Velocity Loop BW (max kHz)	800		800	
Update rate (MHz)			1.25	
Output Current Ripple Frequency (kHz)	31.2		20.8	
Motor Electrical Frequency (max Hz)	900		600	

Smart Feedback Device		
Resolution		
Resolution/Rev	24 bits = .0013 arc min	
Absolute Accuracy		
AKM1	+/- 16 arc min = 10.4 bits/rev	
AKM2, 3 or 4	+/- 9 arc min = 11.2 bits/rev	
Bandwidth		
-3 dB bandwidth	> 2000 Hz	
Communications		
Update period	51.2 µSec	
Emulated Encoder Output		
Binary (pre quadrature line count)	128, 512, 1024, 2048, 4096, 8192, 16384, 32768, 65536 PPR	
Decimal (pre quadrature line count)	125, 500, 1000, 2000, 5000, 10000, 20000 PPR	
Max output line frequency	2.5 MHz	

Options

Connector Kits:	
CK-S200-MF	Motor power and Feedback mating connectors for AC or DC units, for customers building cables
CK-S200-IP-DC	I/O and input Power mating connectors for base DC drive
CK-S200-IP-DC-TB	I/O and input Power mating connectors for base DC drive, Terminal Block adaptor supplied for I/O connector.
CK-S200-IP-AC	I/O and input Power mating connectors for base AC drive
CK-S200-IP-AC-TB	I/O and input Power mating connectors for base AC drive, Terminal Block adaptor supplied for I/O connector.
CK-S200-CNDN	Option card CAN/DN and I/O mating connectors
CK-S200-CNDN-TB	Option card CAN/DN and I/O mating connectors, Terminal Block adaptors supplied for the I/O and feedback connector

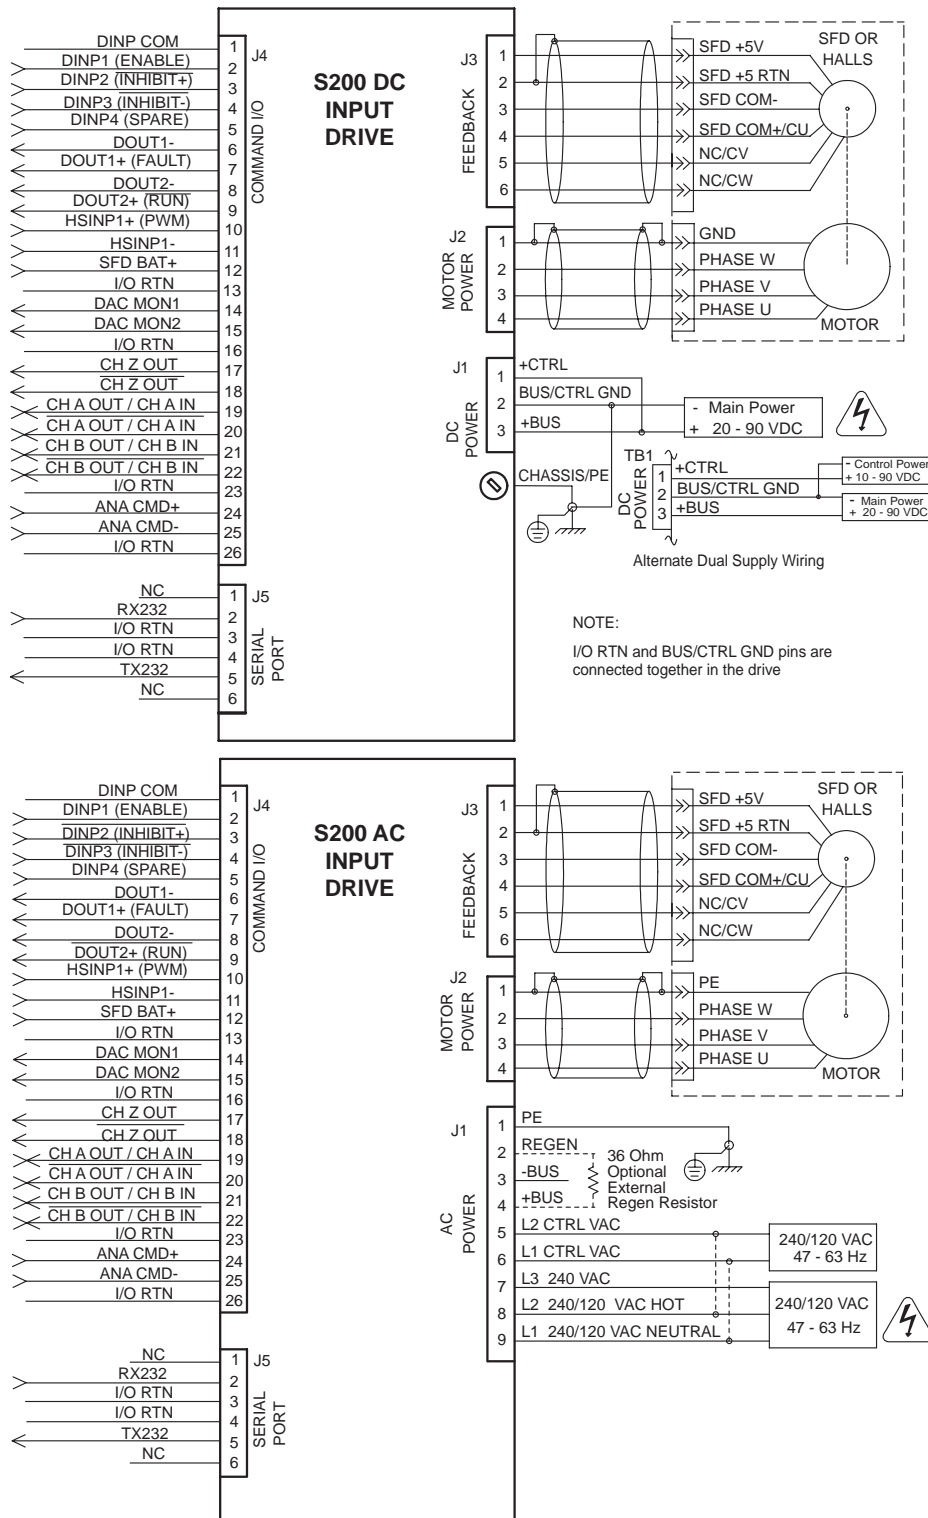

Option Card:

The S200 is designed to support a factory installed option card. Several versions of this card are under development and will support Position Loop Closure with Step/Direction or Incremental Encoder command, Simple Indexing Move Profiles, CANopen field bus support, or DeviceNet field bus support. Please consult the factory for details and availability.

Serial Cable:	
P7S2-232-9D	RS232 serial communication cable (DB9 to Mod Jack) — 6 feet

Cables

CF-DC011N-XX-X	Feedback cable "value series" - Molex connector at the motor end to IEEE1394 connector at drive end for Smart Feedback Device support.
CF-DA0111N-XX-X	Feedback Cable "value series" - Euro connector at the motor end to IEEE1394 connector at the drive end for Smart Feedback Device support.
CP-102AACN-XX-X	Power Cable "value series" - Molex connector at the motor end to S200 crimp pin pluggable connector at the drive end.
CP-102AAAN-XX-X	Power Cable "value series" - Euro connector at the motor end to S200 crimp pin pluggable connector at the drive end.
CC-D01CO2N-XX-X	Composite Cable "value series" - single Molex connector at the motor end to IEEE1394 connector and S200 crimp pin pluggable connector at the drive end for Smart Feedback Device and power support in a single cable.
CC-D01AO2N-XX-X	Composite Cable "value series" - Euro style connector for power and feedback at the motor end to IEEE1394 connector and S200 crimp pin pluggable connector at the drive end for Smart Feedback Device and power support in a single cable. Only available on AKM3 and AKM4 series motors.

The advanced Kollmorgen AKM high performance motor series offers a wide range of mounting, connectivity, feedback and other options. These motors offer superb flexibility to meet application needs with:

- 7 frame sizes
- 25 frame/stack combinations
- 77 'standard' windings
- Fail-safe brakes
- Shaft seals
- Shaft & mounting variations
- Custom windings
- Connectivity

AKM motors offer extremely high torque, density and acceleration

Torque

0.16 to 53Nm continuous stall torque (1.4 to 470lb-in) in 25 frame/stack combinations. Specific torques are often available from multiple frame sizes to optimize mounting and inertia matching capabilities.

Speed

Speeds to 8000 rpm meet high speed application requirements. Windings specifically tailored to lower speeds are also available.

Voltage

AKM motors can be applied to all standard global voltages. Windings are specifically tailored to 75 VDC, 120, 240, 400 and 480 VAC.

Mounting

Multiple mounting standards are available to meet common European, North American, and Japanese standards.

Feedback

AKM motors include resolver, encoder (commutating) or SFD (Smart Feedback Device) feedback options to meet specific application requirements.

Smoothness

Smooth performance results from low-cog, low-harmonic distortion magnetic designs.

Connectivity

Rugged, rotatable IP65 connectors and low cost Molex plugs are both available to provide flexibility. Single connectors/Plugs (combined power and feedback) are also available to minimize motor and cable cost (SFD only).

Thermal

Windings are rated conservatively at 100°C rise over a 40°C ambient while using 155°C (class F) insulation materials. Motors meet all UR, cUR and CE requirements and include thermistors. Thermal ratings at 60°C rise are also provided to meet the needs of specific applications.

Danaher Motion Cables Offer The Complete Solution

Factory cables are provided for your convenience and offer high reliability to keep your application running day and night. The new "Value" line provides a cost saving option for applications that don't require long distances or encounter extreme environmental conditions. Included in our new "Value" line is a

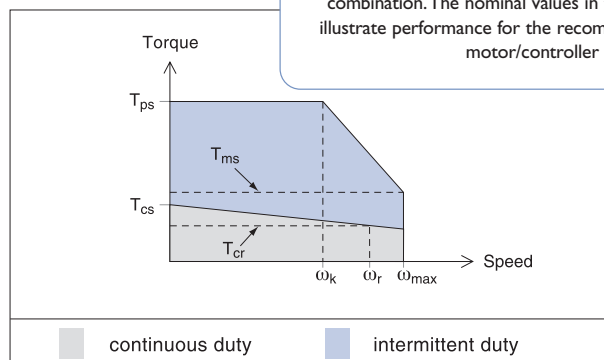

composite cable that combines power and feedback in one cable to aid in faster machine commissioning. Please consult your local sales person or contact the Danaher Motion Customer Support Center to decide which cable option is best suited for your application.

How To Build A Servo Drive & Motor System

Definitions

- T_{ps} - Peak stall torque for system
- T_{ms} - Peak torque at maximum speed
- T_{cs} - Continuous torque at stall
- T_{cr} - Continuous rated torque (torque at rated power)
- ω_{max} - Maximum speed
- ω_r - Rated speed (speed at rated power)
- ω_k - Speed at knee in peak envelope (intersection of system peak torque with voltage limit line)

System torque/speed information on the following pages is designed to help you select the optimum brushless servo motor/controller combination. The nominal values in this data illustrate performance for the recommended motor/controller systems.

Recommended Motor/Drive Systems, 75 VDC bus ①
