LINEAR SOLUTIONS MADE EASY

Stepper Products

OVERVIEW

STEPPER PRODUCT FEATURES

DRIVE **DS SI**

- Self Test
Measures motor parameters automatically to optimize system performance
- Anti-resonance
Achieves higher speeds and better torque utilization
- Command Signal Smoothing
Reduces extraneous system resonances
- Torque Ripple Smoothing (Waveform Smoothing)
Adjusts current waveform to reduce low speed torque ripple

MOTORS **MRS**

- Speeds up to 3,000 RPM
- High resolution (up to 51,200 steps/rev)
- Holding torque requirements up to 1845 oz-in. (13.03 Nm)
- 2000 line Quadrature encoder option
- 10 ft. power cables with connector pre-wired

MULTI-AXIS HUB WITH I/O **HUB**

- Networks stepper products for multi-axis motion applications
- For real-time execution of commands downloaded from a host PC or PLC using Si™ Command Language (SCL)
- Programmable for stand-alone single or multi-axis operations with Applied Motion's easy to use *SiNet Hub Programmer™* Windows software (software and programming cable included)

OPERATOR INTERFACE **MMI**

- Flush or surface mounting
- Four line by 20 character LCD display
- RS232 communication to **SI** [STAC6-Si] controllers
- Enter distances, speeds, and repeat counts to pre-assigned variables in Si™ programming

APPLICATION EXAMPLES

- Pick and place
- Inspection (camera positioning)
- Painting/stencilling
- Gating
- Parts transfer
- Positioning stops/guides
- Position tables
- Indexing
- Work piece placement

Stepper Products

DS & **SI** DRIVE FEATURES

The **DS** [STAC6-S] & **SI** [STAC6-Si] represent the latest developments in stepper drive technology, incorporating features that derive the highest performance from today's stepper motors. Anti-resonance and waveform damping control algorithms make them the clear market leader.

ADVANCED FEATURES

- Self Test
Measures motor parameters automatically to optimize system performance
- Anti-resonance
Achieves higher speeds and better torque utilization
- Command Signal Smoothing
Reduces extraneous system resonances
- Torque Ripple Smoothing (Waveform Smoothing)
Adjusts current waveform to reduce low speed torque ripple
- Microstep Emulation
Smooth, high resolution motion in any application

FEATURES

- Current Output 0.5 to 6.0 A
- 90-135 VAC Input, 50/60 Hz
(for other voltages, contact Tolomatic)
- 167V Bus
- Set-up and configuration software
- Configurable Idle current reduction
- External control options
- Pulse and Direction
- Analog Command Signal
- Host command via RS232/485.
- Integral control options -
Si Programmer™ - intuitive easy to use graphical programming language.

Basic drive; analog, digital and host command input.

- Pulse & direction with microstep emulation
- A/B Quadrature pulse with electronic gearing
- CW and CCW pulse
- Multi-axis functionality if used with a **HUB** [SiNet Hub]
- "Host" commands for real time control from a host PC or PLC using RS-232 or RS-485 serial communication.
- Velocity control mode with fixed rate, proportional analog, and joystick compatibility

Controller/drive; single axis indexer/drive.

- **SI** [STAC6-Si] can be programmed for stand-alone operation with the easy to use *Si Programmer™* Windows® software with integrated motor set-up (software and programming cable included).
- Graphical point and click format combines motion, I/O, and operator interface functionality for simple machine sequencing.
- **SI** [STAC6-Si] can be set-up for Q programming with register manipulation, conditional processing, math functions, and multi-tasking using a comprehensive programming language.

Stepper Products

D**S** & **S****I** *ADVANCED FEATURES*

MICROSTEP EMULATION

With Microstep Emulation, systems that have a need to use low step resolutions can still provide smooth motion. The drive takes the step count and creates microsteps which are fed to the motor.

As an example, this could be used on a retrofit system where the controller resolution is fixed at a low value and cannot easily be changed.

COMMAND SIGNAL SMOOTHING

Dynamic smoothing can soften the effect of immediate changes in velocity and direction, making the motion of the motor less jerky. An added advantage is that this can reduce the wear on mechanical components.

TORQUE RIPPLE SMOOTHING (WAVE FORM SMOOTHING)

All step motors have an inherent low speed torque ripple that can effect the motion of the motor. By analyzing this torque ripple, the system can apply a negative harmonic to negate this effect. This gives the motor much smoother motion at low speed.

ANTI-RESONANCE

Step motors tend to “resonate” at some frequency. By entering system data, this natural frequency can be calculated and a damping term entered into the control algorithm. This significantly improves the midrange stability and allows the motor to achieve higher speeds and make more use of the available torque.

SELF TEST

At start-up, the drive measures the motor parameters, including the resistance and inductance, then uses this information to optimize the system performance. It also compares this information from the last start-up and checks to see if the motor data has changed. This could indicate a fault or system change. The drive can also detect open and short circuits and incorrect motor wiring.

ENCODER FEEDBACK FUNCTIONS

With the addition of an encoder on the motor the **D****S** [STAC6-S] & **S****I** [STAC6-Si] can provide additional functions.

- **Stall Detect** - The drive detects if the motor has stalled and triggers the fault output.
- **Stall Prevention** - Prevent motor stalls before they occur by allowing the drive to automatically reduce motor speed to optimize torque.

DS & **SI** TECHNICAL SPECIFICATIONS

POWER AMPLIFIER SPECIFICATIONS

AMPLIFIER TYPE	MOSFET, Dual H-Bridge, 4 Quadrant
CURRENT CONTROL	4 state PWM at 20 KHz
OUTPUT CURRENT	0.5— 6.0 in 0.01 amp increments
POWER SUPPLY	Line Operated Nominal 120 VAC, 50/60 Hz
DC BUS VOLTAGE	Nominal 165 VDC
AC INPUT VOLTAGE	90—135 VAC, 50/60 Hz (for other voltages, contact Tolomatic)
PROTECTION	Over-Voltage, Under voltage, Over-Temp, External Output Shorts (Phase-to-Phase, Phase-to-Ground), Internal Amplifier Shorts
IDLE CURRENT REDUCTION	Reduction to any integer percent of full-current after delay selectable in milliseconds.
MOTOR REGENERATION	Built in regeneration circuit - 50 watts max.

CONTROLLER SPECIFICATIONS

NON-VOLATILE STORAGE	Configurations are saved in FLASH memory aboard the DSP
MODE OF OPERATION	Step & Direction, CW/CCW, A/B Quadrature pulse, stored program, Joystick
STEP AND DIRECTION INPUTS	Optically Isolated: 5 Volt. Minimum pulse width = 200 ns. Maximum pulse frequency = 2 MHz
SPEED RANGE	Depends upon application. Amplifier is suitable for speeds up to 133 rps
RESOLUTION	Software selectable from 200-to-51200 steps/rev in increments of 2 steps/rev
ANTI RESONANCE	Raises the system damping ratio to eliminate midrange instability allowing stable operation to 50 rps or greater
TORQUE SMOOTHING	Allows for fine adjustment of phase current waveform harmonic content to reduce low-speed torque ripple in the range 0.25 — 1.5 rps
AUTO SETUP	Measures motor parameters automatically
SELF TEST	Identifies the presence of an encoder and determines resolution. Diagnoses miswires and open phases
MICROSTEP EMULATION	Performs low resolution stepping by synthesizing fine microsteps from coarse steps
ENCODER OPTION	Employs encoder to provide failsafe stall detect
INTERFACE	RS-232 and RS-485 Bus
ENCODER	Differential line receivers suitable for 200 KHz or greater
AMBIENT TEMPERATURE	32- 158° F (0 to 70° C)
HUMIDITY	90% non-condensing

CONFIGURATOR™ & SI PROGRAMMER™ SOFTWARE

Set-up and Configuration Software

The A.M.P. [Applied Motion Products] CONFIGURATOR™ software simplifies the setup and configuration of the **DS** [STAC6-S] & **SI** [STAC6-Si]. Click on the icon representing the aspect of the drive that needs changing and an intuitive dialog box will open. Configuration data for A.M.P. recommended motors is available from a drop down menu.

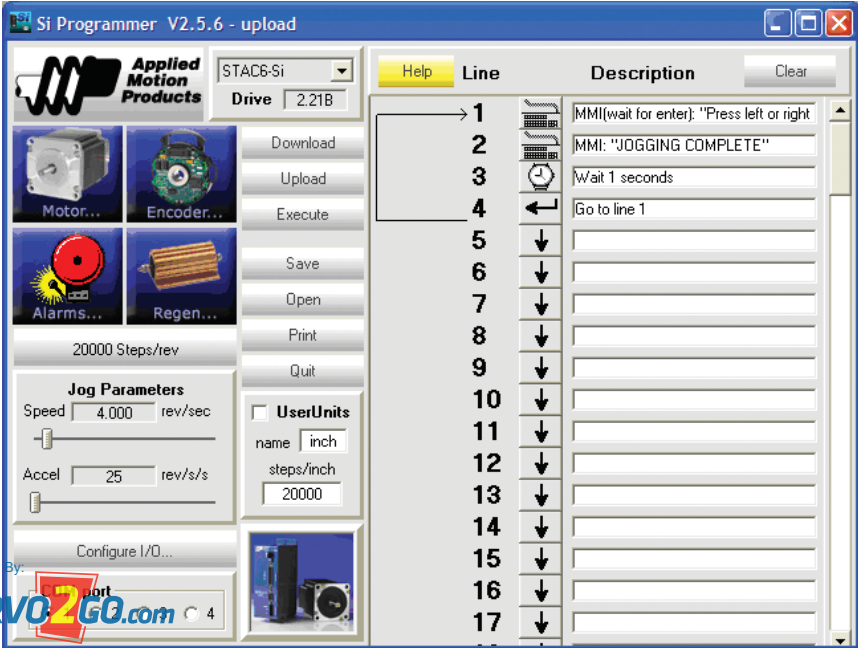

Input / Output Monitor screen capture

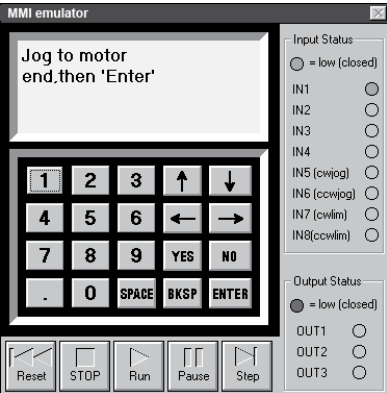

Motor selection screen capture

SI PROGRAMMER™ SOFTWARE

The **SI** [STAC6-Si] is designed to be both configured and programmed through software. Virtually all the **SI**'s [STAC6-Si] functions are controlled by software. The Si Programmer™ software that comes with the drive allows setting the motor current, the step resolution, jogging parameters and limit switch polarity. It also allows the writing of complex motion control and machine interaction programs.

HUB MULTI-AXIS MOTION HUB WITH I/O

DESCRIPTION

The **HUB** [SiNet Hub444] allows up to 4 stepper drives to be controlled in host mode from a single PC, a PLC's RS-232 serial port, or run in stand-alone mode. Each indexer-drive acquires its address from the port to which it is connected. This simple addressing scheme minimizes drive set-up and configuration time. Connections are made with low-cost, reliable (RJ11) telephone cabling.

The **HUB** [SiNet Hub444] is powered by the drive that is connected to port #1, saving you the cost and installation expense of using a separate power supply. Si™ Command Language (SCL) allows a host PC or PLC to execute relative, absolute and homing moves, make status inquiries, sample inputs, set outputs, and more.

FEATURES:

- Networks stepper products for multi-axis motion applications
- For real-time execution of commands downloaded from a host PC or PLC using Si™ Command Language (SCL)
- Programmable for stand-alone single or multi-axis operations with Applied Motion's easy to use *SiNet Hub Programmer™* Windows software (software and programming cable included)
- Communication via RS232
- Four optically-isolated programmable inputs
- Four optically-isolated programmable outputs
- DIN rail mounting

SiNet Programmer Windows® software allows the user to create and store multi-axis motion control programs in the **HUB** [SiNet Hub444] and run them without a PC. This function allows the user to create a multi-axis motion system controlled from an operator interface or trigger.

If your application requires multiple axes to operate in "host mode" you can connect any programmable drive directly to your PC via the **HUB** [SiNet Hub444] and invoke the Si™ Command Language (SCL).

HUB MULTI-AXIS MOTION HUB WITH I/O

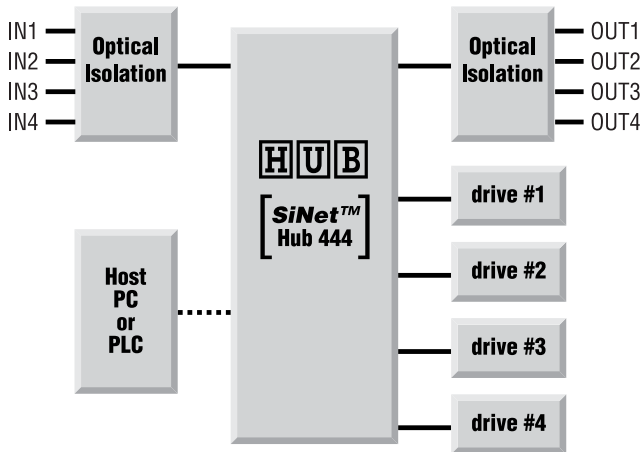

TECHNICAL SPECIFICATIONS

Power	Power is provided by Si indexer-drive on Port 1. Provides up to 50 mA for MMI via PC/MMI port
Communication	Ports 1 - 4: RS232, 9600 bps, 8 data bits, one stop bit, no parity MMI: same PC in router mode: same PC when running <i>SiNet Hub Programmer™</i> software: 19200 bps Max cable length, any port: 50 feet
Physical	Constructed on .062" fiberglass printed circuit board with 4 .156" mounting holes (nylon spacers included). 4.2" x 2.85" x 0.72" Two red LEDs Operating temperature range: 0 - 70° C DIN rail mounting (fits ENS0022 35 mm rail)
Program	Move distances: +/- 16,000,000 steps Move speeds: .025 to 50 rev/sec Accel/Decel range: 1 to 3000 rev/sec/sec Time delays: .01 to 300 seconds Loop counts: 1 to 65,535 Number of nested loops: unlimited Number of subroutines: unlimited Subroutine stack depth: 5 calls maximum Number of comments: limited only by 200 line program length MMI variables for storing speeds, distances and loop counts entered by operator: 50 Maximum size of messages displayed by an MMI Prompt: 60 characters (80 for an MMI Menu instruction) Maximum total size of all MMI Prompt messages: 1500 characters Steps/revolution: 2,000 - 50,800
Connectors	RJ11 for drives and PC/MMI. Screw terminals for programmable inputs and outputs. Accept AWG 16-28 wire
Programmable Inputs	Optically isolated, 2200 ohms internal impedance, 5–24 VDC.
Programmable Outputs	Optically isolated (photo darlington), 28 VDC max, 100 mA max.

MMI OPERATOR INTERFACE

User interaction with the **SI** [STAC6-Si] is simple with the **MMI** operator interface. Software allows visual setup of the panel to show a particular action taking place, it prompts the user to make a decision, or provides information such as move distance, move speed, repeat count.

FEATURES

- Flush or surface mounting
- Four line by 20 character LCD display
- Uses (RJ11) telephone cable with **SI** [STAC6-Si] controllers
- Enter distances, speeds and repeat counts to pre-assigned variables in **SI** [STAC6-Si].

CABLES

Motor cable and encoder cable are included when ordering **SI** [STAC6-Si] controllers. User supplies (RJ11) telephone cables.

DIMENSIONS

Unless otherwise noted, all dimensions shown are in inches (Dimensions in parenthesis are in millimeters)

BOB BREAK OUT BOARD

Break Out Boards **BOB** for the DB25 I/O connectors of a **DS** [STAC6-S] & **SI** [STAC6-Si] drive are available. Each Break out board comes with a 1 foot extension cable and a din-rail mountable terminal strip to make connecting the I/O points of a **DS** [STAC6-S] & **SI** [STAC6-Si] drive easier.

BOB1 is for the IN/OUT1 connector of **DS** [STAC6-S] & **SI** [STAC6-Si] drives.

BOB2 is for the IN/OUT2 connector of **SI** [STAC6-Si] drive only.
